

# Configurer mon compte Hosted Exchange sous android

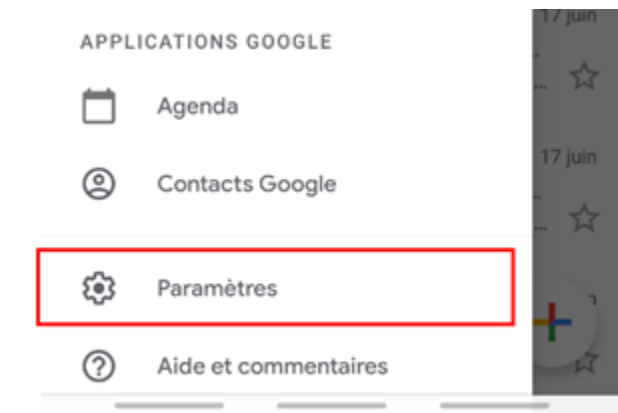

## Step 1: Add the account

On your device's homepage, open the Gmail app. You can add an account in two different ways:

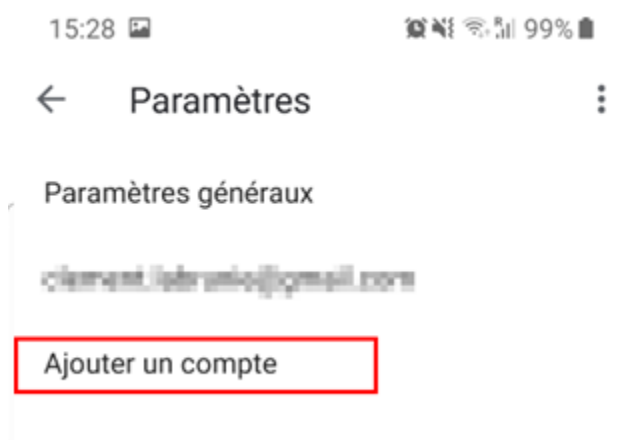

- If no account has been set: Tap through the welcome screen, and tap Add email address. Next, choose Exchange and Office 365.
- If an account has already been set: Tap the three-line icon on the top left-hand corner

- then the settings icon on the bot left-hand corner.

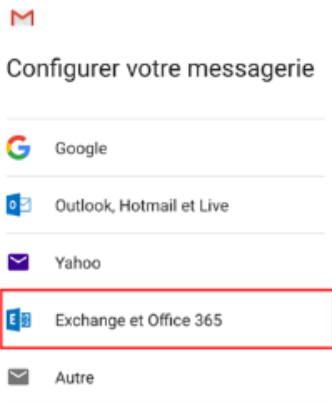

- Next, tap Add account

- and choose Exchange and Office 365.

15:28 99%

Enter your email address, then tap Next.

Enter your email password

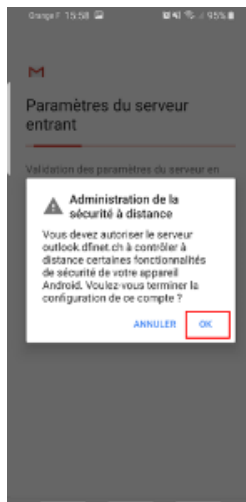

Do not select any client certificates, then tap Next to continue configuring your account

Enter the incoming server settings. Some fields may be auto-filled.

Information	Description
Domain/Username	Enter your full email address.
Password	Enter the password for your email address.
Client certificate	Do not select anything.
Server	<a href="https://outlook.dfinet.ch">Outlook.dfinet.ch</a>
Port	443
Security type	SSL/TLS

To finalise your configuration, you will need to authorise the OVH server to control certain security features on your device. Tap OK

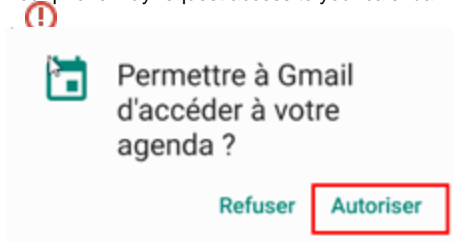

Then activated

Then press Next

Your phone may request access to your calendar if it has never been done:

Once you have configured your email address, you can start using it! You can now send and receive emails.

DFI Service SA also offers a web application accessible via <https://outlook.dfinet.ch>. You can log in using your email credentials.
